We specialize in Oilfield and Pipeline Pressure Washing, Hydro Excavating, and Super Vac Truck services. With extensive experience working in the oilfield and gas industry, we maintain complete safety while also eliminating downtime. We're available exactly when you need us, 24/7, 365 days a year.

SERVICES OVERVIEW

Every company operating Iraq will find the weight of administration daunting. Fields company can help by operating on behalf of clients organizing all requirements including Oil services and Processing services Supply services can be a complex field to navigate in Iraq with local tribal affiliations, local councils and differing degrees of professionalism to be found across different regions of the country. Fields can help companies with the Public transport services ,ensuring costly and potentially serious mistakes are avoided.

1-Public transport

“Our ability to offer turnkey logistics solutions—from supply chain management of rig and FPSO new building and conversions through to the transportation of heavy-lift structures supported by our in-house transport engineering division and finally logistics support for offshore and onshore assets in operation, is what gives Fields company an edge over its competitors,” commercial .Fields Company. remains flexible in its management approach and agile in its decision making, enabling us to swiftly adjust to market conditions and tailor unique solutions to meet the exact needs of our clients.”

Fields company is a major oil and gas logistics supplier . The Company has been in the oil and gas logistics business for over four decades and supports some of the leading operators and service companies in the world. Fields company has more customers, in more locations, than any other provider in Iraq.

Fields company has highly-skilled employees in Iraq, on staff 24 hours a day, seven days a week. It is imperative that its employees are capable of managing dangerous conditions in this industry. “If you look at the range of the people we have and the skills that we offer, we can tap into a fantastic pool of talent within Fields company to tailor solutions for our clients’ needs, that experience is unparalleled within our industry.”

Transporting, storing and delivering products for the oil and gas industry require highly-skilled teams of professionals. We are one of the top logistics companies, which service the industry by ensuring safety and security in order for oil and gas to efficiently and cost-effectively reach the end user.

2- Processing services

The construction industry in Iraq faces many challenges, especially in the current circumstances when it is imperative to its employees think seriously in order to advance the progress in the field of construction. Construction materials are one of the main resources on which the construction project, along with the workers, depends. Equipment and capital and these materials are exposed to damage due to poor storage, transportation, and waste due to weakness in the skill of implementation and management, and for the purpose of studying this aspect of materials management to reduce the rate of waste and spoilage estimated. Researchers study the factors affecting waste and spoilage from a theoretical standpoint in addition to conducting a field questionnaire. For a number of projects under implementation for the purpose of studying and determining the percentage of impact for each factor affecting waste and damage to construction materials, and this was done by making tables linking these factors with each other in a dialectical relationship. Each paragraph depends on the other paragraph.

Discerning customers who value the convenience of a reliable single fuel supplier, trust Fields Company shipping. As a global fuel distributor, Fields Company is a full service fuel supply solution for high grade petroleum, renewable fuel, bio fuel, and specialty liquid drilling products. Our turnkey service extends from the pipeline to the gas tank. As a trusted fuel provider, we are committed to maintaining uncompromised quality, distributing the highest-quality products to fuel stations, truck stops, fleets & refineries.

We have developed strong global partnerships with ocean, road and rail shipping to streamline the energy supply operations from purchase to delivery. We design customized strategy for your energy procurement at every level of supply and management- purchase, operation, finance, equipment maintenance, and delivery.

3- Supply services

The oil and gas industry operates through a global supply chain that includes domestic and international transport, trading, shipping, ordering, and inventory visibility and control. Other supply chain elements include material handling, import/export facilities, and the distribution of refined energy products from points of origin to market. Typically, the supply chain is divided into three segments. The upstream segment finds and produces crude oil and natural gas. The midstream segment handles the processing, storing and transporting of energy commodities. And the downstream segment encompasses oil refineries, retail outlets and natural gas distribution companies. Given the many steps involved in energy processing, transportation and logistics, the oil and gas supply chain is understandably complex. Yet with global competition on the rise, industry professionals find that supply chain improvements are both necessary and cost effective. Leveraging the cloud, Internet of Things (IoT), team collaboration and blockchain digital technologies, among others, enhanced value chains can reduce costs and enhance operations at every stream of oil and gas production. For example, digital systems can help mitigate risk, optimize warehouse inventory strategy, monitor the logistics of transportation, enhance the customer experience, and help ensure the best procurement strategies are in place.

4- ENGINEERING & TECHNICAL SERVICES

Fields Company Engineering & Technical Services was inaugurated in 2020 to provide the highest quality of service and support for high-integrity mechanical equipment. With our advanced diagnostic and testing equipment, access to OEM spares and support which is provided through Fields Company extensive network of manufacturing partners, our operations meet the highest industry standards for quality, safety and environment management. Fields Company has invested in advanced casing and tubular make-up equipment with connection analysis for completion or downhole tool assemblies.

Technical support engineers provide troubleshooting and tech support services to a wide range of internal and external clients across many industries, including telecom, healthcare, and financial services.

5- cleaning services

Did you know that our oil tank cleaning systems are easier, faster and safer for you to carry out your oil tank cleaning and oil recovery processes? Fields Company develops automated, non-man entry tank cleaning and oil recovery solutions designed for optimum Health, Safety and Environmental (HSE) performance. Our systems clean aboveground oil storage tanks and recovery waste oil in a safe and efficient way.

Particularly, in cases of larger tanks containing crude oil, or other “black oil” products, such as residue, and heavy gas oils, cleaning of these tanks is a major undertaking that requires a great deal of planning, resources, manpower, time, and expenses. Moreover, the increasingly stringent legislation and regulations regarding environmental protection, safety practices, and operator’s health, have placed additional pressures on the oil and petrochemical industries to utilize safer and more environmentally friendly tank cleaning methods.

Our cleans tanks with the highest safety, much more quickly, and with recovery of valuable products, which minimizes the disposal of large volumes of pollutants. A distinctive feature of the system is its closed loop cleaning system, which heavily reduces the impact of tank cleaning on the environment and provides the highest percentage of hydrocarbon recovery.

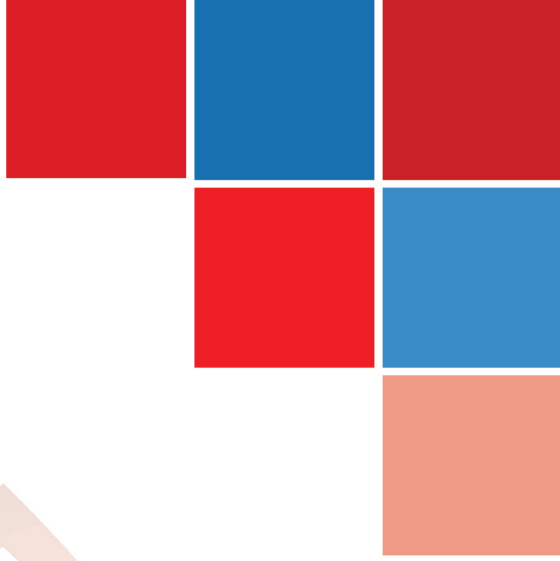

6-Pipeline Services

Increasing consumption of natural gas, rising demand for energy and the discovery of new gas and oil reserves, high investments lined up for pipeline business are some key factors influencing the market growth. However, issues related to by cross-border oil & gas pipeline projects is hampering the market growth.

Based on service, the pre-commissioning & commissioning segment is constantly enhancing due to huge volume of pipeline (km) pre-commissioning in Iraq. Pre-commissioning is the series of processes carried out on the pipeline before the final product is introduced.

By geography, Iraq is estimated to have a lucrative growth due to rising demand for energy and transportation produced crude & natural gas from remote locations in the region

Petroleum & Gases

Lab Accessories

LIST OF EQUIPMENT IN MICROBIOLOGY LABORATORY

ANALYTICAL BALANCES (DENVER, AND GX600)

Shaker Incubator (Gerhardt)

In the microbiology laboratories it is among the leading devices which are based on the principle of shaking at different temperatures according to the purpose and the work load of the laboratory. It is used in cultivating, multiplying and in the characterization tests of microorganisms. This device provides the heat necessary for the growth of microorganisms.

AUTOMATIC CONCRETE COMPRESSION MACHINE

Automatic range of compression testing machines have been designed for reliable and consistent testing of a wide range of specimens. These compression testers are the results of continuous research to upgrade the testing machines with the latest technologies to conform to the latest standards EN 12390-3, EN 12390- 4, BS 1881 and ASTM C39 in terms of its technical properties taking into account client requirements.

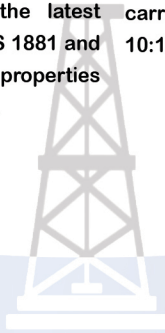

DIRECT SHEAR TESTING MACHINE

The tests performed using Direct Shear Test Machine covers the determination of consolidated drained shear strength of a soil material in direct shear. TS-2060 Automatic Direct / Residual Shear Test Machine is motorised and floor mounted. Supplied with carriage assembly load hanger and integral 9:1, 10:1 and 11:1 lever loading device as standard.

AUTOMATIC CEMENT COMPRESSION TESTING MACHINES

The automatic range of single testing chamber and double testing chamber compression and flexure testing machines have been designed for reliable and consistent testing of mortar samples.

SIEVE SHAKERS

Electromagnetic Digital Sieve Shaker performs a vertical sieving motion and by removing the upper plate it can also be used as a vibrating table for one concrete specimen. The vertical sieving motion is provided by a very effective electromagnetic unit which is designed to obtain the best results with sand and aggregates. Supplied complete with timer.
